Write code for the following method:

```java
// Method: pyramid
// Produces console output as described below.
// Must be able to produce output of the following form with any integer as a parameter
// pyramid(5); // will produce the output:
// -----1-----
// ----333----
// ---55555---
// --7777777--
// -999999999-
// pyramid(3); // will produce the output:
// ---1---
// --333--
// -55555-
// (Non-positive values passed to method will produce no output.)

public static void pyramid(int size) {
    // Implement your code
}
```
